

Savera Engineering Accelerates Operational Excellence with SAP S/4HANA

Savera Engineering is a leading manufacturer of precision-engineered components and assemblies for the automotive, industrial, and general engineering sectors. Known for quality, precision, and timely delivery, the company operates with a commitment to innovation and customer satisfaction.

Before: Challenges and Opportunities

- Disconnected systems for procurement, inventory, production, and finance
- Manual data entry leading to errors and compliance risks
- Limited real-time reporting on material usage and costing
- Delays in month-end financial closing and order tracking

Why SAP and SAVIC Technologies?

- Unified ERP platform integrating manufacturing, sales, inventory, and finance
- Real-time analytics enabling faster, data-driven decisions
- Industry best practices and pre-configured templates for rapid deployment
- Scalable foundation to support future automation, IoT, and compliance

After Value-Driven Results

- Real-time monitoring across departments
- Accurate costing and BOM control
- Reduced rework and increased first-time-right production
- Transparent supply chain operations

“SAP S/4HANA has transformed the way we operate — from production to finance, everything is now integrated, faster, and more reliable. We’re positioned to scale confidently with total visibility into operations.”
