Featured Solutions and Services

SAP S/4HANA

Sujan have expertise in manufacturing of Body Sealing Components, Fluid Transfer Systems & Vibration Absorption Systems for automobiles. Their product ensures a quieter and more comfortable driving experience, by suppressing noise and vibration in the automobile.

Before: Challenges and Opportunities

- Adaptive processes that will map the best practices of manufacturing, specifically in the anti-vibration rubber segment.
- End-to-end solution that would include core SAP modules, best practices in manufacturing through mapping of appropriate business process, all in a single platform.

After: Value-Driven Results

- Simplified business processes with SAP S/4HANA.
- Best practices for automotive enterprise by using proven technology framework.
- Automotive solution tailored to business needs.
- Reduced cost and faster analysis on SAP HANA

Why SAP and SAVIC Technologies Private Limited

- SAVIC helped the client in implementing the solution within the defined timelines
- Pre-configured solution reduced the costs associated with external implementation resources
- An integrated system minimizes operational costs through low interface maintenance and reduces support costs, whilst delivering seamless processes from a single information database.
- Improved customer information services through a fully integrated system, which allows for a connected enterprise.
- Fully scalable solution that grows with the growth of the organization, without any expensive re-implementations or system migrations.

We relied 100% on SAP Digital Business Services and implementation partner SAVIC to meet all of our project goals on time and within budget. Our reliance paid off, and all participants pulled together and worked in sync
